

IGOR MIRANDA

Senior Dart / Flutter Specialist

Production mobile and backend engineer building with Flutter since its beta era.

Email: igor-devwork@outlook.com | Portfolio: igorcurriculum.com | GitHub: github.com/igormidev

LinkedIn: linkedin.com/in/igor-midev | Upwork: upwork.com/freelancers/igormidev | WhatsApp: [+55 21 96710-3488](https://wa.me/+5521967103488)

SUMMARY OF QUALIFICATIONS

- Senior Dart and Flutter engineer with end-to-end experience across mobile, web, package authoring, architecture, PostgreSQL-backed APIs, and production delivery.
- Founder and full-stack engineer of Root Hub, a published iOS and Android community app with approximately 60 monthly active users.
- Top Rated Upwork freelancer with 100% job success and senior Flutter delivery experience on a product with more than 800 thousand users.
- Technical leadership experience in banking and fleet payments, with a performance-first and maintainability-focused engineering approach.

CORE TECHNICAL SKILLS

Languages and frameworks: Dart, Flutter, Flutter Web, Serverpod, PostgreSQL, Firebase, Supabase, Jaspr, dart_frog, shelf, Aqeduct, gRPC.

Architecture and state: Riverpod, BLoC, Freezed, GetX, MobX, Triple, Flutter Hooks, go_router, auto_route, flutter_modular, clean architecture, package-based monorepos, custom lints.

Product and quality: PostHog, Firebase Cloud Messaging, Firebase Analytics, AppsFlyer, Shorebird, secure storage, deep linking, i18n, offline-first flows, realtime systems, DevTools, profiling, mocktail, Mockito, RLS.

AI systems: OpenAI Responses API, vector-store file search, RAG, server-sent events, LangChain, MCP integrations, agent orchestration, context engineering.

FEATURED PUBLISHED PRODUCT

Root Hub | Founder and Full-stack Dart / Flutter Engineer

Published on iOS and Android | Approximately 60 monthly active users

[Google Play](#) | [Apple App Store](#)

- Built a complete ROOT board-game community platform for nearby table discovery, hosting, invitations, scheduling, match reporting, player history, and unified rankings.
- Designed a custom opponent-relative rating algorithm with 13 faction-specific ratings, global aggregation, break-even score targets, favorite and underdog pressure, starter protection, winner bonuses, milestone history, leaderboards, and rebuild/backfill services.
- Delivered rich table chat with text, images, voice messages, replies, emoji reactions, typing/read state, unread counts, media validation, BlurHash placeholders, cloud storage, and localized push notifications.
- Implemented a Flutter client with Riverpod, Freezed, go_router, secure storage, FCM, PostHog, Shorebird code push, and Serverpod-generated contracts.
- Built a Dart and Serverpod backend with PostgreSQL models, authenticated versioned endpoints, transaction-safe match workflows, Google Places integration, background tasks, and multilingual responses.
- Integrated an OpenAI Responses API rules assistant with streamed reasoning and answers plus vector-store file search over multilingual ROOT rules, FAQs, and terminology.
- Created a Jaspr portal that detects iOS and Android, opens app deep links, preserves invite data across app-store fallbacks and Android install referrers, and hosts legal, support, and analytics pages.
- Created a custom lint plugin and deterministic checker for Flutter component boundaries, file naming, localization, endpoint versioning, required language parameters, translated server responses, and client/server locale parity.

PROFESSIONAL EXPERIENCE

Freelance Senior Flutter Engineer | Upwork

March 2023 - Present

[Upwork profile](#)

- Earned Top Rated status with 100% job success while delivering production Flutter work directly to clients.
- Built long-term client relationships through product quality, clear communication, and pragmatic execution.

Senior Flutter Engineer | Football social app with 800k+ downloads

April 2023 - Present

[DreamStock on Google Play](#)

- Delivered Pix payments, feed performance improvements, club selection queries, post UX refactors, in-app banners, rankings and badges, crowdfunding, and YouTube Shorts integration.
- Created the public youtube_shorts package to encapsulate production Shorts playback logic.

Senior Flutter Engineer | Alinea Health

April 2023 - December 2023

[Alinea on Google Play](#)

- Contributed production features to a health-plan app, including video and provider chat experiences.
- Delivered within a task-demand freelance model in a health-product context.

Tech Lead | Target Bank and Target Fleet

February 2022 - April 2023

[Bank app](#) | [Fleet app](#)

- Designed maintainable and scalable Flutter architecture for banking and fleet-payment products.
- Led delivery of reliable apps for truck-driver digital banking and accredited gas-station payment operations.

SELECTED DART AND FLUTTER PACKAGES

- **babel_text** - https://pub.dev/packages/babel_text - Marker-based rich text with styles, callbacks, tooltips, selectable content, and inline widgets.
- **pricing_page** - https://pub.dev/packages/pricing_page - Responsive Flutter pricing UI with async CTA states and polished plan presentation.
- **youtube_shorts** - https://pub.dev/packages/youtube_shorts - Production-oriented vertical YouTube Shorts playback for Flutter.
- **dart_debouncer** - https://pub.dev/packages/dart_debouncer - Multi-instance debounce flows for rapid Dart and Flutter interactions.
- **enchanted_collection** - https://pub.dev/packages/enchanted_collection - Collection utilities and reusable algorithms for day-to-day Dart development.
- **enchanted_regex** - https://pub.dev/packages/enchanted_regex - RegExp helpers focused on advanced group handling and practical parsing.
- **cursor_autocomplete_options** - https://pub.dev/packages/cursor_autocomplete_options - Desktop and web autocomplete overlay aligned to the text cursor.

OTHER FOUNDER-BUILT PRODUCTS

- **ZenScrap** - <https://github.com/igormidev/zenscrap> - AI-assisted scraping SaaS that converted natural-language extraction requests into tested scrapers and reusable APIs, with Serverpod, Flutter, analytics, billing, and a self-healing repair loop.
- **Mustache Hub** - <https://github.com/igormidev/mustachehub> - Flutter and Firebase SaaS for structured Mustache templates, reusable variables, saved collections, shareable URLs, and live output generation.

TECHNICAL DIFFERENTIATORS

- Flutter since beta, with deep practical knowledge of framework internals, rendering, widget lifecycle, state-management tradeoffs, navigation, deep links, and production debugging.
- Performance-first delivery focused on rebuild control, profiling, render-pipeline efficiency, memory behavior, and eliminating jank before it reaches users.
- Architecture discipline around package-based monorepos, internal packages, critical-path testing, custom lints, internationalization, offline/sync/realtime behavior, analytics, and backend security.
- Advanced AI-assisted engineering workflows with specialized agents, MCP tools, project skills, planning/execution/review loops, RAG pipelines, and context engineering.

PORTFOLIO VISUALS
